EDUCATION

Vellore Institute of Technology, Bhopal

Madhya Pradesh, India

Bachelor of Technology in Computer Science Engineering

2023 – 2027

CGPA: 8.46/10.0

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL

Core Computer Science: Object-Oriented Programming (OOP), Data Structures and Algorithms

Machine Learning and AI: PyTorch, Convolutional Neural Networks (CNNs), ConvNeXt, Computer Vision, scikit-learn

Data Science and Analytics: Data Collection, Data Preprocessing, Data Analysis, Data Visualization, Web Scraping

Frameworks and Tools: pandas, Plotly, Dash, joblib

PROJECTS

Bovine Vision: Cattle & Buffalo Breed Classifier | *GitHub* | *Python, PyTorch, ConvNeXt*

- Developed a deep learning image classification model using PyTorch to identify 6 cattle and buffalo breeds for computer vision-based livestock classification.
- Implemented a ConvNeXt-Tiny architecture with image normalization and data augmentation to improve model generalization across breed classes.
- Tuned model hyperparameters in collaboration with a teammate, achieving 91.6% training accuracy, 87.4% validation accuracy, and an F1-score of 0.84 across 30 training epochs.
- Built a Python evaluation pipeline to generate loss curves and confusion matrices for model performance analysis and error identification.

SpaceX Falcon 9 Landing Predictor | *GitHub* | *Python, scikit-learn, Dash, Plotly*

- Developed an end-to-end machine learning pipeline to predict SpaceX Falcon 9 booster landing success using 533 historical launch records extracted through web scraping.
- Trained a Random Forest Classifier with scikit-learn using launch parameters including payload mass, orbit, and launch site, achieving 97.2% classification accuracy.
- Built an interactive Plotly Dash application featuring launch analytics visualizations and a prediction interface for exploring model outputs.

Chronic Disease Predictor | *GitHub* | *Python, scikit-learn, Dash, Plotly, pandas*

- Developed a Random Forest classification model to predict chronic disease risk using 13 patient health features, achieving 94.33% accuracy and a 93.33% F1-score.
- Created an interactive Plotly Dash application with exploratory data analysis visualizations and a real-time prediction interface with out-of-range input validation.
- Implemented model evaluation using confusion matrices, analyzed true and false predictions, and serialized trained models with joblib for reuse.

ACHIEVEMENTS (COMPETITIVE PROGRAMMING)

- **Competitive Programming:** Completed 700+ algorithmic challenges across multiple platforms, tracked through Coderlio.
- **LeetCode:** Achieved a maximum rating of 1437 with 330+ successful submissions.
- **CodeChef:** Achieved a maximum rating of 1403 (2-star) and participated in 19+ contests.
- **Codeforces:** Achieved a maximum rating of 929 (Newbie) with 35+ verified solutions.

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate** – Amazon Web Services (Sep 2026)
- **IBM Data Science Professional Certificate** – Coursera (Aug 2026)
- **Applied Data Science Specialization** – Coursera (Aug 2026)
- **Google IT Support Certificate** – Google (Jan 2026)
